## A SWITCH OF THE PITCH -AND AWAY YOU GO!

The biggest sensation in years is what

"variable pitch propellers" have done for Dynaflow Drive

L pickup-and pronto, So you get it. You get it by pushing the accelerator pedal of a 1955 Buick all the way to the floor board.

Then-without jerk or lag or lurch or pause-you get action! You get action whether you're just starting off - or asking for a safety-surge of power out on the highway.

There's nothing like it in past experience-because there has never been anything like it in an automobile before. This is action that comes from the

principle of variable pitch propel. So, that means lers used on modern planes. Their propeller blades change "pitch" for take-off-and cut hundreds of feet off the time required to lift a plane from a runway.

\*\*\* MILTON BERIE STARS FOR SUICK-See the Buick-Berle Show Alternate Tuesday Evenings

And the amazing fact is-in a 1955 there's only one thing for you to do. Try out a 1955 Buick, and soon. Buick Dynaflow Drive there are 20 little propeller-like blades that also change their pitch, just like we've mentioned. Try it out for the propeller blades of a plane.

This is a transmission engineer's dream of heaven. A build-up of momentum as smooth as flowing high-fashion Buicks which cet oil-and almost as quick as lightning-plus better

gas mileage in cruising range. It's what the whole automobile industry has been shooting for -and Buick has it.
